

WHAT IS CLAIMED IS:

1. A method for selecting to activate a personal digital assistant (PDA) or a mobile phone in an electronic device comprising a menu containing a PDA option and a mobile phone option such that when said device is enabled, said PDA or said mobile phone option is selectable for generating a signal indicating said selection, and a central processing unit (CPU) for showing a prompt of said selected PDA option or said mobile phone option for use after receiving said signal.
2. The method of claim 1, comprising the steps of:
 - 10 (a) displaying a menu containing a PDA option and a mobile phone option for selection by activating a display means after powered on;
 - (b) selecting one of said options by clicking through an activated input means; and
 - (c) determining by said CPU which of said PDA option and said mobile phone option is selected and if said mobile phone option is selected, said CPU reading a program stored in a mobile phone read only memory (ROM) for showing a prompt of said mobile phone, closing a switch means for commanding a transceiver means through a control circuit, transmitting messages from an antenna or received by said antenna, and operating said device for reading data from a random access memory (RAM) or writing data into said RAM.
- 20 3. The method of claim 2, further comprising the step of:
 - (d) said CPU reading a program stored in a PDA ROM if said PDA option is selected for showing a prompt of said PDA, controlling said selected PDA option by said control circuit, and operating said device for reading data from said RAM or writing data into said RAM.
